

Carl A. Ziegler, Ph.D.

Exoplanet Astronomer | Associate Professor (August 2026) | Director, SFA Observatory
carl.ziegler@sfasu.edu | (936) 244-8545 | carlziegler.space | Google Scholar | NASA ADS

Academic Profile

Observational astrophysicist and university educator with more than a decade of experience in exoplanet characterization, stellar multiplicity, adaptive optics, speckle interferometry, and robotic surveys. Leads international high-resolution imaging programs for Kepler and TESS, develops automated Python analysis pipelines, and translates research into instrumentation, open-source software, authentic student research, and public astronomy programs.

180+ refereed publications | 5,400+ career citations | h-index 49 (Google Scholar) | 4,800+ Kepler/TESS hosts imaged | 20+ student researchers mentored

Research and Technical Expertise

Research: exoplanet detection and characterization; planetary systems in multiple stars; high-angular-resolution imaging; survey and instrument design; selection effects, uncertainty analysis, Bayesian modeling, Monte Carlo simulation, time-series photometry, and population inference.

Technical: Python, Astropy, emcee, JavaScript, HTML/CSS, C++, LabVIEW, Mathematica, Zemax, and SolidWorks; automated reduction pipelines, image registration, PSF subtraction, astrometry, contrast curves, robotic telescope control, scientific visualization, and browser-based simulation.

Academic Appointments

Assistant Professor of Astronomy; Associate Professor effective Aug. 2026

2020–Present

Stephen F. Austin State University

Nacogdoches, TX

- Director of the SFA Observatory, leading research, instructional, and public-outreach operations, student training, observing programs, eclipse events, and regional partnerships.
- Teach and develop courses from introductory astronomy through astrophysics, observational astronomy, mathematical methods, and senior practicum; design exams, laboratories, projects, and rubrics aligned with explicit learning objectives.
- Mentored more than 20 undergraduate and graduate researchers in Python, photometry, high-resolution imaging, exoplanet follow-up, and scientific software, resulting in refereed coauthorships, conference presentations, REU placements, graduate study, and technical careers.

Dunlap Postdoctoral Fellow

2018–2020

Dunlap Institute for Astronomy and Astrophysics, University of Toronto

Toronto, Canada

- Founded the SOAR TESS Survey and One-Hit Wonders program; developed automated target selection, observing, reduction, and validation workflows for high-resolution imaging and long-period transiting planets.

Research Leadership and Scholarly Innovation

SOAR TESS Survey, Principal Investigator (2018–Present). Lead a systematic speckle-imaging survey on the 4.1-m SOAR Telescope. The cumulative HRCam census covers 2,982 targets and contains 731 source detections around 689 hosts. Paper III finds 3.5 times fewer companions inside 50 au and 2.6 times fewer inside 100 au than the field-star expectation. Coordinate telescope operations, target selection, collaborators, student researchers, data products, and publication cycles.

Robo-AO Kepler Survey and Robo-AO-2. Collaborators and I imaged all 3,857 Kepler planet-candidate systems, supporting validation of more than 1,500 planets. Co-I on NASA's selected TESS Cycle 9 GI program; a \$162,000 Phase 2 budget was invited (formal award pending) for a dual-band visible/near-infrared survey of about 4,000 TOIs, with public delivery through ExoFOP.

Gravitas, Creator and Lead Developer (2025–Present). Designed and deployed an open-source browser-based astronomy simulation, co-developed with an undergraduate researcher, for orbital dynamics, black holes, energy conservation, spacetime, gravitational-wave sonification, and exoplanet transit light curves. Integrated it into guided-inquiry instruction. [Launch Gravitas](#).

Teaching, Mentorship, and Outreach

- **Documented teaching effectiveness:** 2025 annual student-evaluation average of 4.85/5; evaluations regularly exceeded 4.5/5 across ten semesters. Formal peer and administrative reviews document sustained growth and pedagogical innovation.
- Rebuilt Observational Astronomy as a semester-long authentic research experience and developed an upper-level Astrophysics II course with original notes, problem sets, examinations, and worked solutions; completed four ACUE courses and SFA Certified Online Instructor training.
- Organized more than 20 public observing nights since 2021, reaching more than 2,000 visitors; led a 2023 annular-eclipse event for more than 200 attendees and supported 2024 total-eclipse programming, school visits, Scout events, camps, and regional STEM partnerships.

Selected Publications

Education

Ph.D., Physics, 2018, University of North Carolina at Chapel Hill. Dissertation: *Characterization of Exoplanets and Stellar Systems with New Robots*. **M.S., Physics, 2013**, Southern Illinois University Carbondale. **B.A., Physics and Mathematics, 2009**, William Jewell College.
